Get the information you need

With access to any table in Microsoft Dynamics GP as well as being able to access external SQL tables and views, Navigation List Builder lets you take advantage of the speed and flexibility of Navigation Lists with all the data you need. You can create custom versions of existing lists or create new lists based on any Microsoft Dynamics GP Module.

Achieve more with custom actions

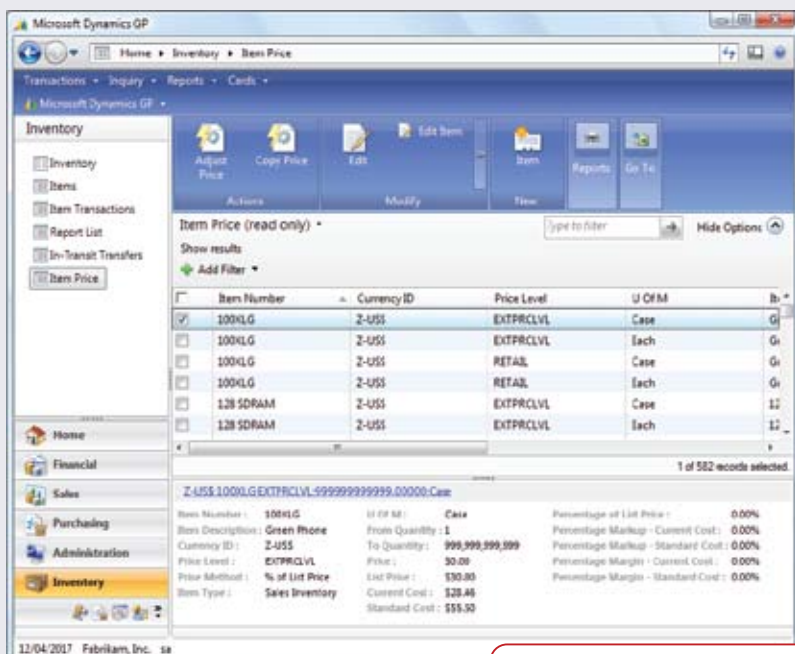

Add actions to your Navigation Lists to open any form or run any report in Microsoft Dynamics GP. Take advantage of improved versions of the standard Microsoft Dynamics GP actions and new advanced actions to do more in less time. Launch websites and files directly from your Navigation Lists. Use in conjunction with SmartConnect to update information with any eConnect-enabled module.

Access to data is more secure

Add record level security to lists with restrictions based on users and user classes. Restrict access to subsets of data for all users.

Work with third party applications

Include data captured within third party applications, in the you new lists. In addition, link to external data from your CRM, POS, HR or any other system and display that data within Microsoft Dynamics GP Lists.

Interact with your data with custom actions in the action panel

DYNAMICS GP BUSINESS ESSENTIALS

Navigation List Builder

FEATURES

Access Microsoft Dynamics GP data	Display information from any Microsoft Dynamics GP dictionary, including third party products.
Access SQL Server data	Display information from any SQL Server table or view.
Calculated Fields	Create calculated fields using SQL syntax.
Formatting	Navigation List Builder allows you to control how fields in navigation list are formatted. Change the number of decimal places, format strings with standard and custom string masks, apply currency and percentage symbols. Automatically display notes or account numbers.
Preview Pane	Select 3 columns of data fields to be previewed when a record is selected.
Actions	Create custom actions to open forms, run reports, launch files and websites. Perform standard Microsoft Dynamics GP actions such as customer aging and transaction posting.
Integration with SmartConnect and Extender Enterprise	Create actions that call SmartConnect or Extender Enterprise. Use SmartConnect actions to create or update records using eConnect. Interact with Extender Enterprise forms using Extender actions.
Restrictions	Place fixed restrictions on lists to hide sensitive information. Apply restrictions to all users or a group of users.
XML Import/Export	Share navigation lists by importing and exporting via XML.

SUCCESS STORIES

Case Study: Genero Group

"We would be lost without the custom lists and custom actions. It helps Dynamic GP fit our business".

"We were taught how to use lists in V10 and we loved it, but there was always some piece of data that was missing or we could not get to. With Navigation List Builder we have got over this limitation, and have built custom actions to speed up our daily functions. Being a finance company customers often call in to get an up to the day snapshot of their position and we use a custom action to provide this on-screen while talking to customers".
Andrew Murray, CEO, Genero Group
